

SPECTRAVET

SpectraVET Laser Therapy provides a highly-effective, well-tolerated, drug-and-side-effect-free method of treatment for fractures, tendon, ligament and muscle injuries, skin problems, surgical incisions and wounds, orthopedic procedures, arthritis and degenerative joint conditions, chronic and acute inflammation, and pain.

Whether your pet is actively competing, healing from a wound, rehabilitating from an injury, or just getting old, this revolutionary new approach will greatly improve performance, recovery, comfort and quality of life.

Widely researched and clinically proven, SpectraVET Laser Therapy is a safe and effective form of treatment for companion animals and animal athletes alike.

Harnessing Light for Health.

lick granulomas

fractures

chronic & acute pain

nerve regeneration

SpectraVET Laser Therapy
is
'therapeutic photobiology'

SPECTRAVET
PHOTOTHERAPEUTICS

www.SPECTRAVET.com.au

Laser Therapy is a specific form of photobiomodulation (PBM), a drug-free, non-invasive procedure that uses laser light to affect photo-chemical changes in living tissue.

By controlling the amount of light, and where and how it is delivered, we use those photo-chemical changes to modulate biological processes and generate the best therapeutic outcomes for your pet.

SpectraVET Laser Therapy is a safe non-invasive technique that offers anti-inflammatory and pain-relieving effects equal to NSAIDs but with no side-effects.

Laser Therapy also promotes wound healing and the repair of soft tissues and bones, enhances the body's immune response, and encourages nerve tissue regeneration.
